Our mission is to offer you more options and solutions at lower cost than you pay now.

02.NATURE OF ACTIVITES

INTERNATIONAL AIR FREIGHT SERVICES

AIR FREIGHT

At **TNM GLOBAL LOGISTICS** we understand the importance of logistics planning that goes into air freight. Our quality control and excellent customer service guarantee that your shipments are delivered on time. We have the back up of:

- Our global network with the world's airlines and access to international airports
- Door-to-door and airport-to-airport services
- Our comprehensive knowledge of regulations to efficiently process documentation for the global trade of imports and exports
- Our brokerage expertise in coordinating and managing customs clearance
- Our global network of specialists to handle all types of dangerous and hazardous goods

SEA FREIGHT SERVICES

SEA FREIGHT

Close to world-class port - TNM GLOBAL LOGISTICS manages the import and export of goods through Chittagong Port , Bangladesh largest port which currently world's busiest ports. We operate our own container Freight Station in Chittagong. We also manage the transportation of goods through Bangladesh other large ports

Flexible-sized containers - We have the versatility to handle Full Container Load (FCL) and Less than Container Load (LCL) shipments to make it cost effective for customers. We also manage the shipment of odd-shaped and sized cargo in special containers that include open-top, collapsible flat rack and reefer containers.

Access to networks and shipping information - TNM GLOBAL LOGISTICS giving us access to updated information on laws, regulations, policies, statistics and trends on the Freight forwarding and shipping industry. The association provides training and links to other freight forwarding associations worldwide which allows us to compare and provide competitive shipping rates.

Transloading - TNM GLOBAL LOGISTICS handles all air, ocean and rail transloading services. By transferring cargo from one mode of transport onto another, customers reduce transit times and the cost of freight services while allowing for flexibility and ensuring reliability.

Transshipment - Once cargo is transported to the warehouse for temporary storage, we take full responsibility for its transshipment to the customer's final destination. We have wide experience in the transshipment of different dimensions of cargo by sea or air including fragile and sensitive shipments. We have especially built our expertise in handling cargo for several growth industries that include timber, steel coil, cars, rubber and DG chemical products.

GROUND FREIGHT TRANSPORTATION

At **TNM GLOBAL LOGISTICS** we offer heavy haulage solutions for the delivery of cargo that include perishables, fragile or time-sensitive freight for just-in-time stock management and door-to-door delivery anywhere

Our container transport services include side loaders or semi-trailers to transport containers from one vehicle to another. We also have trailers for handling 20 and 40 foot containers.

We offer special cross-border services for the transportation of goods to others counters.

We provide customers the option of specified delivery time schedules to meet their business needs.

We have the latest GPS technology to track our trucks in real-time so we know where our trucks are at any time.

WAREHOUSING :

At **TNM GLOBAL LOGISTICS** we handle your cargo securely and with care. When we stuff and unstuff cargo into and from containers, our experienced team makes it hassle-free by using a systematic approach and technology that reduces the risk of damage to goods.

Cargo securing – Because goods are transported over greater distances, we use cargo restraint products that are secure, cost effective, environmentally friendly and meet all regulations. We are aware that negligence in cargo security can lead to accidents, loss of cargo and cause environmental damage.

Cargo Restraints – We use many quality and reliable products to stabilize and secure cargo in vehicles and intermodal containers.

We have the expertise and experience to secure break bulk cargoes of various sizes, dimensions and weight. **Break bulk cargo** are usually packaged in bags, corrugated boxes, crates, drums or barrels. This cargo can include forest products, metals, machines, electronics, chemicals, consumer goods and others.

Individual units of cargo are formed into tightly packed **unit loads** and secured to a pallet or skid which have a flat wood base for easy handling by a fork-lift truck.

These unit loads are combined, held, reinforced and fastened using stretch wrap, shrink wrap, and pressure sensitive tape. Unit loads are also **strapped** using various steel and **plastic straps**. Steel is used for its strength and minimal stretch properties. Polyester and nylon straps help a load absorb impact without strap breakage.

We use a method called **cargo lashing** for heavy cargoes of any shape like machines or boilers. Lashing provides maximum security and minimum shifting. Items used for lashing include ropes, cables, wires, chains and nets. We observe strict quality control of our lashing methods based on international guidelines.

We use **cargo chocking** to secure large loads or when multiple items need securing. The load chocking method is suitable for tying down loads such as timber planks, pipes and guttering.

Packing, Labeling and Weighing – At **TNM GLOBAL LOGISTICS** we handle the full set of operations required to ensure goods for transport overseas are packed, labeled, documented and insured.

When **packaging products** we ensure that goods are protected from damage if they are dragged, pushed, rolled or dropped during transportation and unloading. We also make sure we minimize the problems of breakage, moisture, pilferage and excess weight. Since transportation costs are determined by volume and weight, we use specially reinforced and lightweight packing materials that have been developed for exporting. This makes it cost effective for the customer

We use specific **marking and labeling** on export shipping cartons and containers to:

- Meet shipping regulations
- Ensure proper handling
- Conceal the identity of the contents
- Help receivers identify shipments, and
- Insure compliance with environmental and safety standards.

We meet customs regulations for **freight labeling** by including such information as the shipper's mark, the custom's identification code, country of origin and port of entry, weight, number and size of cases, handling remarks and labels for hazardous materials.

We use **weighing scales and systems** that are as efficient as possible without compromising on safety. This ensures billing is accurate and vehicles are filled to the optimum safe capacity. We also use weighing and scale software that transforms your raw weight information into business intelligence, allowing you to analyze and optimize your weighing operations

Dangerous Goods -We comply with strict regulations governing the packaging, classification, labeling and declaration of dangerous goods that are capable of posing a significant risk to community, property and the environment when transported by sea, air, road or rail. These goods may include flammable gases and liquids and infectious and toxic substances. We make sure the container or vehicle containing dangerous goods for export are accompanied by the **Container/Vehicle Packing Certificate (CPC)** which declares that the goods meet regulations for transport.

Fumigation Certificate - We make all arrangements with a licensing authority to conduct the fumigation of products that have pests, termites and other harmful living organisms. This is especially important where wood materials are used to pack products. Methyl Bromide is commonly and widely used as fumigants for fumigation all over world. Fumigation is a legal requirement and a fumigation certificate is issued together with other by export documents.

Cargo Storage – At **TNM GLOBAL LOGISTICS** we arrange for the storage of dutiable goods in a **bonded warehouse** where specialised storage services such as deep freeze or bulk liquid storage are available. Goods in bonded storage can be cleaned, sorted, repacked or their condition changed so they can be exported without the payment of duty or withdrawn for local consumption after the payment of duty.

We can also secure the cost-effective use of a **non-bonded or public warehouse** for customers who want the flexibility of renting only the space they need on a long or short term basis. Customers can also hire equipment and trained labour required to help them with the storage, supply and distribution of their goods.

Inventory Management – At **TNM GLOBAL LOGISTICS** we have the professional expertise and facilities to manage your inventory efficiently and securely. We can create, maintain and update records of the inventory of your goods transported, stored and distributed in the warehouse using sophisticated software. Based on our customer's needs we can provide customized reports on an hourly, daily or monthly basis so they can keep track of inventory at any time.

CUSTOM BROKERAGE

CUSTOM BROKERAGE

At **TNM GLOBAL LOGISTICS** we are experienced and knowledgeable in all country and commodity specific customs clearance procedures, rules and regulations. We help process documents for:

- Export Custom Clearance (Air / Sea)
- Import Custom Clearance (Air / Sea)
- Project Cargo Clearance
- Duty Drawback Claim Service (refund for duty paid on goods destroyed or already paid in previous exports)
- Registration / Clearance / Completion of clearances under Duty Exception Licenses
- Customs Duty Refund services.
- Conventional Cargo

We ensure we meet customs requirements from permit issuing authorities such as The Bangladesh Ministry of International Trade and Industry, SIRIM- a technology and research standards authority, CIDB –a standards authority for the construction industry and OGA – Other Government Agencies.
